NEW EXTERNAL PAVEMENTS AND ROADWAYS FOR INTEGRAL ENERGY.

- ❖ Storage Bins
- ❖ Heavy parking areas
- ❖ Drive through areas
- ❖ Roadways.

The main challenge was To renew the old existing pavements without disrupting the day to day operations of Integral Energy.

Jigsaw Developments P/L, built the new facility at Hoxton Park, Sydney, but when it came to constructing the external pavements they knew that to maintain the ongoing operations time constraints were going to be critical.

The design Engineer, James Griffiths Engineers, suggested they use a Dramix high performance steel fibre pavement design.

This enabled Jigsaw Developments to prepare areas of 1000m²-1400m² without the need for mesh and chairs, and then immediately place the required amount of SFRC saving precious time and minimizing disruption to operational traffic.

In all, 15,000m² were placed and finished by Statewide Concrete who controlled all facets of placing external concrete to a high standard, resulting in a crack free, fibre free, durable surface.
