

Another Formula Floors Project – **Economy & Quality without Compromise**

Soon to be completed is the 44,000 square metre Westgate Logistics – Coles Facility in Altona Victoria, developed and built by Salta Constructions for Salta Properties.

To enable a cost effective and efficient construction program to be realized Salta Constructions accepted a Design and Construct package from V & G Concrete Constructions P/L which opted for a “Formula Floors” approach by BOSFA for the superflat internal Dramix Steel Fibre reinforced concrete warehouse floor.

On this project the driving force behind the system was V & G Concreting Services P/L.

Managing Director, Mr Ivan Vigliaroni was quoted as saying he can optimize his companies skilled manpower and specialist equipment necessary to provide consistent quality and related cost efficiencies using the Formula Floors approach to benefit his current and prospective clients. Mr Vigliaroni said he has used this approach successfully throughout Australia and has recently been requested to tender on projects in Saudi Arabia incorporating the Formula Floors pavement system.

The internal floor of the Westgate Logistics – Coles Facility was undertaken in 48 individual pours. Significant time savings were achieved on this project which, in terms of an overall completion time, resulted in the internal floor being finished in just 11 weeks.

Mr. Vigliaroni believes he provided quality, speed & efficiency for an appreciative builder.

This system of total design management of slabs on ground, utilizing the highest quality Dramix steel fibres, is now firmly established as the preferred method of producing a high quality industrial floor, with nearly two million square metres of high quality flooring constructed in the last three years.

BOSFA's approach to improving the quality of industrial floors has been to align themselves with the best concreting contractors that not only have invested enormously in the latest hi-tech equipment, but also have a commitment to giving their clients the very best end product, a Formula Floor by BOSFA.

More than 2 million square metres of BOSFA 'Formula Floors' have been constructed over the past 3 years.
